

**Developments in operational meteorology and climatology over the last 25 years using the example of the Deutscher Wetterdienst
Gerhard Adrian (DWD Offenbach)**

Abstract:

Today, the German Weather Service is an information provider with a largely fully automated and uninterrupted operation, from data acquisition to customer supply. This talk attempts to provide an overview of the professional and technical developments made especially in the last 25 years to achieve this, which have also led to changes in the entire job profiles.
